PART I – RNA Background and Methodology

Executive Summary

What is the RNA?

The Prevention Resource Center's (PRC) Regional Needs Assessment (RNA) is a document created by Melissa Romain-Harrott along with Data Coordinators from PRCs across the State of Texas and supported by Texas Health and Human Services Commission (HHSC). The PRC 6 serves 13 counties in the Gulf Coast Region of Texas.

This assessment was designed to aid PRCs, HHSC, and community stakeholders in long-term strategic prevention planning based on most current information about the unique needs of Texas' diverse communities. This document will present a summary of statistics on risk and protective factors associated with drug use, as well as consumption patterns and consequences data; at the same time, it will offer insight on gaps in services and data.

Who writes the RNA?

A team of Data Coordinators has procured national, state, regional, and local data through collaborative partnerships with diverse agencies such as law enforcement, public health, and education, among others.

How is the RNA informed?

Qualitative data collection has been conducted, in the form of questionnaires, focus groups, and interviews with key informants. The information obtained through these partnerships has been analyzed and synthesized in the form of this RNA. PRC 6 recognizes those collaborators who contributed to the creation of this RNA. Quantitative data has been extrapolated from federal and state agencies to ensure reliability and accuracy.

Main key findings from this assessment include:

Demographics

Substance Use Behaviors

Underlying Conditions

Behavioral Health Disparities

Protective Factors and Community Strengths

Methodology

This needs assessment is a review of data on substance misuse, substance use disorders, and related variables that will aid in substance misuse prevention decision making at the county, regional, and state level. In this needs assessment, the reader will find the following:

- primary focus on the state-delineated prevention priorities of alcohol (underage drinking)
- tobacco/nicotine, marijuana, prescription drugs, and other drug use among adolescents
- exploration of drug consumption trends and consequences, particularly where adolescents are concerned
- and an exploration of related risk and protective factors as defined by The Center for Substance Abuse Prevention (CSAP)

Conceptual Framework

The conceptual framework for this report examines empirical indicators related to the Social Determinants of Health (SDoH), documented risk and protective factors, consumption patterns, and public health consequences as they associate with substance use/misuse and behavioral health challenges. The indicators are organized in the domains (or levels) of the Social Ecological Model (SEM), as described below. For the purpose of strategic prevention planning, the report attempts to identify behavioral health disparities and inequities present in the region.

Purpose/Relevance of the RNA

The regional needs assessment can serve in the following capacities to:

- determine patterns of substance use among adolescents and monitor changes in substance use trends over time
- identify gaps in data where critical substance misuse information is missing
- determine county-level differences and disparities
- identify substance use issues that are unique to specific communities
- provide a comprehensive tool for local providers to design relevant, data-driven prevention and intervention programs targeted to needs
- provide data to local providers to support their grant-writing activities and provide justification for funding requests
- assist policymakers in program planning and policy decisions regarding substance misuse prevention, intervention, and treatment at the region and state level

Process

HHSC and the Data Coordinators collected primary and secondary data at the county, regional, and state levels between September 1, 2020 and June 30, 2021. Due to the global pandemic, COVID-19, the Regional Needs Assessment deadline was extended to August 31, 2021.

Between September and July, HHSC staff meets with the Data Coordinators via monthly conference calls to discuss the criteria for processing and collecting data. The information is primarily gathered through established secondary sources including federal and state government agencies. Region-specific data collected through local law enforcement, community coalitions, school districts and local-level governments are included to address the unique regional needs of the community. Additionally, qualitative data is collected through primary sources such as surveys and focus groups conducted with stakeholders and participants at the regional level.

Primary and secondary data sources are identified when developing the methodology behind this document. Readers can expect to find information from the American Community Survey, Texas Department of Public Safety, Texas School Survey of Drug and Alcohol Use, and the Community Commons, among others. For the purpose of this needs assessment, adults and youth in the region were selected as primary sources.

Quantitative Data Selection

Identification of Variables

The data collected is the most recent data available within the last five years. However, older data might be provided for comparison purposes.

Criteria for Selection

The criteria used for including data sets in this document are their relevance, timeliness, methodological soundness, representativeness, and accuracy. The data arise from well-documented methodology gathered through valid and reliable data collection tools.

Qualitative Data Selection

Data Coordinators conduct focus groups, surveys, and interviews with community members about what they believe their greatest needs to be. These qualitative data collection methods often reveal additional sources of data.

Key Informant Interviews

Interviews are conducted primarily with school officials and law enforcement officers where available. Participants are randomly selected by city and then approached to participate in an interview with the Data Coordinator. Each participant is asked the following questions:

- What problems do you see in your community?
- What is the greatest problem you see in your community?
- What hard evidence do you have to support this as the greatest problem?
- What services do you lack in your community?

Other questions inevitably arise during the interviews, but these four are asked of each participant.

Focus Groups

Participants for the focus groups are invited from a wide selection of professions including law enforcement, health, community leaders, clergy, high school educators, town councils, state representatives, university professors, and local business owners. In these sessions, participants discuss their perceptions of how their communities are affected by substance use/misuse and behavioral health challenges.

Longitudinally Presented Data

To capture a richer depiction of possible trends in the data, we report multi-year data where it is available from respective sources. Most longitudinal presentations of data in this needs assessment consist of (but are not limited to) the most recently available data collected over three years in one-year intervals of data-collection, or the most recently-available data collected over three data-collection intervals of more than one year (e.g. data collection for the TSS is done in two-year intervals). Efforts are also made in presenting state- and national-level data with county-level data for comparison purposes. However, when neither state-level nor national-level data are included in tables and figures, this is generally because the data was not available at the time of the data request. Such requests are made to numerous counties, state, and national-level agencies in the development of this needs assessment.

Prevention Resource Centers

PRCs are funded by the Texas Health and Human Services Commission (HHSC) to provide data and information related to substance use and misuse and to support prevention collaboration efforts in the community. There is one PRC located in each of the eleven Texas Health Service Regions (see Figure 1) to provide support to prevention providers located in their region with substance use data, trainings, media activities, and regional workgroups.

PRCs focus on the state's overall behavioral health and the four prevention priorities:

- underage alcohol use
- underage tobacco and nicotine products use
- marijuana and other cannabinoids use
- prescription drug misuse

PRCs have four fundamental objectives:

- collect data relevant to the state's prevention priorities and share findings with community partners
- ensure sustainability of a Regional Epidemiological Workgroup focused on identifying strategies related to data collection, gaps in data, and prevention needs
- coordinate regional prevention trainings and conduct media awareness activities related to risks and consequences of alcohol, tobacco, and other drugs (ATOD) use
- conduct voluntary compliance checks and education on state tobacco laws to retailers

Region 10	Upper Rio Grande
Region 11	Rio Grande Valley/Lower South Texas

How PRCs Help the Community

PRCs provide technical assistance and consultation to providers, community groups, and other stakeholders to identify data related to substance use and behavioral health in general. PRCs work to promote and educate the community on substance use and misuse and associated consequences through various data products, media awareness activities, and an annual regional needs assessment. In this way, PRCs provide stakeholders with knowledge and understanding of the local populations they serve, help guide programmatic decision making, and provide community awareness and education related to substance use and misuse. The program also helps to identify community strengths, gaps in services and areas for improvement.

Data Coordinators

The PRC Data Coordinators serve as a primary resource for substance use and behavioral health data for their region. They lead a Regional Epidemiological Workgroup (REW), compile and synthesize data, and disseminate findings to the community. The PRC Data Coordinators also engage in building collaborative partnerships with key community members who aid in securing access to information.

Key Concepts

Adolescence

The World Health Organization (WHO) identifies adolescence as a critical transition in the lifespan characterized by tremendous growth and change, second only to infancy. This period of mental and physical development poses a critical point of vulnerability where the use and misuse of substances, or other risky behaviors, can have long-lasting negative effects on future health and well-being. The focus of prevention efforts on adolescence is particularly important since approximately 90% of adults who are clinically diagnosed with SUDs, began misusing substances before the age of 18.¹

Qualifiers for age-specific terms related to different data sources will be referenced in each section.

Texas School Survey

The Texas School Survey of Drug and Alcohol Use (TSS) collects self-reported tobacco, alcohol, and substance use data among students in grades 7 through 12 in Texas public schools. The survey is sponsored by HHSC and administered by the Public Policy Research Institute (PPRI). PPRI actively recruits approximately 20% of Texas public schools with grades 7 through 12 to participate in the statewide assessment during the spring of even-numbered years.²

During the 2019-2020 school year, schools across Texas were closed from early March through the end of the school year due to the COVID-19 pandemic. Due to this sudden and unexpected closure, many schools that had registered for the survey were unable to complete it. Please note that both the drop in participation along with the fact that those that did complete did so before March may have impacted the data. - Public Policy Research Institute

Grade 12	3,215	11.5%	7,920	13.0%	-4,705
Total	27,965	100.0%	60,776	100.0%	-32,811

Epidemiology

Epidemiology is described as “the study of the occurrence and distribution of health-related events, states, and processes in specified populations, including the study of the determinants influencing such processes, and the application of this knowledge to control relevant health problems.”³ This definition provides the theoretical framework that this assessment uses to discuss the overall impact of substance use and misuse. Epidemiology frames substance use and misuse as a preventable and treatable public health concern. The Substance Abuse and Mental Health Services Administration (SAMHSA), the main federal authority on substance use, utilizes epidemiology to identify and analyze community patterns of substance misuse and the contributing factors influencing this behavior.

³ Porta, Miquel S. *A Dictionary of Epidemiology*. Oxford: Oxford University Press, 2016, p. 95.

Strategic Prevention Framework (SPF)

The Strategic Prevention Framework (SPF) provided by CSAP guides many prevention activities in Texas (see Figure 4). In 2004, Texas received a state incentive grant from CSAP to implement the SPF in close collaboration with local communities to tailor services to meet local needs for substance abuse prevention. This prevention framework provides a continuum of services that target the three classifications of prevention activities under the National Academy of Medicine (NAM), which are universal, selective, and indicated.⁴

FIGURE 4. STRATEGIC PREVENTION FRAMEWORK (SPF)

Strategic Prevention Framework

Assessment

Profile population needs, resources, and readiness to address needs and gaps

Capacity

Mobilize and/or build capacity to address needs

Planning

Develop a Comprehensive Strategic Plan

Implementation

Implement the Strategic Plan and corresponding evidence-based prevention strategies

Evaluation

Monitor, evaluate, sustain, and improve or replace those that fail

Socio-Ecological Model

The Socio-Ecological Model (SEM) is a conceptual framework developed to better understand the multidimensional factors that influence health behavior and to categorize health intervention strategies. This RNA is organized using the six domains (or levels) of the SEM as described below:

- Societal Domain - social and cultural norms and socio-demographics such as the economic status of the community
- Community Domain - social and physical factors that indirectly influence youth including educational attainment of the community, community conditions, the health care/service system, and retail access to substances
- School Domain - social and physical factors that indirectly impact youth including academic achievement and the school environment
- Family Domain - social and physical factors that indirectly impact youth including family conditions and perceptions of parental attitudes
- Peer Domain - interpersonal factors including social norms and youth perceptions of peer consumption and social access
- Individual Domain - intrapersonal characteristics of youth such as knowledge, skills, attitudes, beliefs, and behaviors

The SEM proposes that behavior is impacted by all levels of influence, from the intrapersonal to the societal, and that the health promotion programs become more effective when they intervene at multiple levels. Changes at the community level will create change in individuals, and the support of individuals in the population is essential for implementing environmental change.

Risk and Protective Factors

One component shared by effective prevention programs is a focus on risk and protective factors that influence adolescents. Protective factors decrease an individual's risk for a substance use disorder. Examples include strong and positive family bonds, parental monitoring of children's activities, and access to mentoring. Risk factors increase the likelihood of substance use behaviors. Examples include unstable home environments, parental use of alcohol or drugs, parental mental illness, poverty levels, and failure in school performance. Risk and protective factors can exist in any of the domains of the Socio-Ecological Model (see Figure 5).⁵

Social Determinants of Health (SDOH)

The U.S. Department of Health and Human Services, Healthy People 2030 defines the SDOH as the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. The SDOH are grouped into 5 domains; economic stability, education access, health care access, neighborhood and built environment, and social and community context. SDOH's have a major impact on health, well-being, and quality of life, they also contribute to health disparities and inequities.

FIGURE 6. SOCIAL DETERMINANTS OF HEALTH (SDOH)

Adapted from: Healthy People 2020

health.gov/healthypeople/objectives-and-data/social-determinants-health

Consumption Patterns

This needs assessment follows the example of the TSS, the Texas Youth Risk Surveillance System (YRBSS), and the National Survey on Drug Use and Health (NSDUH), by organizing consumption patterns into three categories: lifetime use (has tried a substance, even if only once), school year use (past year use when surveying adults or youth outside of a school setting), and current use (use within the past 30 days). These three consumption patterns are used in the TSS to elicit self-reports from adolescents on their use of tobacco, alcohol, marijuana, and illicit drugs and their misuse of prescription drugs. The TSS, in turn, is used as the primary outcome measure of Texas youth substance use and misuse in this needs assessment.

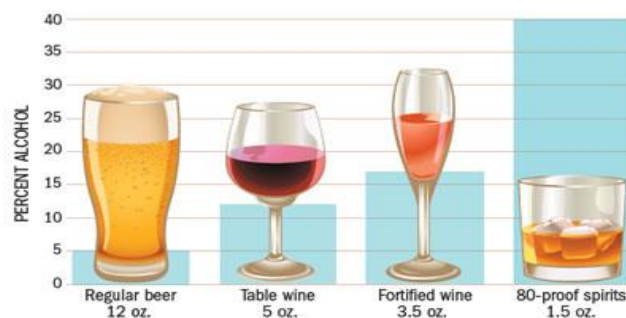

A plethora of information exists on risk factors that contribute to Alcohol Use Disorder (AUD) in the United States. According to SAMHSA, AUD is ranked as the most wide-reaching SUD in the U.S. for people ages 12 and older, followed by Tobacco Use Disorder, Cannabis Use Disorder, Stimulant Use Disorder, Hallucinogen Use Disorder, and Opioid Use Disorder. When evaluating alcohol consumption patterns in adolescents, more descriptive information beyond the aforementioned three general consumption categories is often desired and can be tapped by adding specific quantifiers (i.e., per capita sales, frequency and trends of consumption, and definitions of binge drinking and heavy drinking), and qualifiers (i.e., consequential behaviors, drinking and driving, alcohol consumption during pregnancy) to the operationalization process.

The National Institute on Alcohol Abuse and Alcoholism (NIAAA) has created very specific guidelines that are widely used in the quantitative measurement of alcohol consumption (see Figure 7).

Some alcoholic drinks contain more alcohol than others. As with all matter's nutritional, you need to consider the portion size. For example, some cocktails may contain an alcohol "dose" equivalent to three standard drinks.

FIGURE 7. NATIONAL INSTITUTE ON ALCOHOL ABUSE AND ALCOHOLISM (NIAAA)

Percentage of Alcohol in Standard Portions

National Institute on Alcohol Abuse and Alcoholism <https://www.niaaa.nih.gov/> Accessed April 16, 2020

Consequences

One of the hallmarks of SUDs is the continued use of a substance despite harmful or negative consequences. SUDs have health consequences, physical consequences, social consequences, and specific consequences for adolescents. The prevention of such consequences has received priority attention as Goal 2 (out of four goals) on the 2016-2020 NIDA Strategic Plan titled *Develop new and improved strategies to prevent drug use and its consequences*.

We caution our readers against drawing firm conclusions about the consequences of SUDs from the data reported here. The secondary data we have drawn from does not necessarily show a causal relationship between SUDs and consequences for the community.

Stakeholder/Audience

This document can provide useful information to stakeholders from a variety of disciplines: substance use prevention and treatment providers; community coalitions; medical providers; school districts and higher education institutions; city, county, and state leaders; and community members interested in public health and drug consumption. The information presented in this report aims to contribute to program planning, evidence-based decision making, and community education.

The executive summary found at the beginning of this report provides highlights of the report for those seeking a brief overview. Since readers of this report will come from a variety of backgrounds, a glossary of key concepts can be found at the end of this needs assessment. The core of the report focuses on risk factors, consumption patterns, consequences, and protective factors.

PART II – Geographical Area and Community Demographics

Regional Demographics

Overview of Region

Geographic Boundaries

The geographical scope of work for PRC Region 6 encompasses 13 counties (see Figure 8): Austin, Brazoria, Chambers, Colorado, Fort Bend, Galveston, Harris, Liberty, Matagorda, Montgomery, Walker, Waller, and Wharton.

FIGURE 8. LOCATION AND 13 COUNTIES OF REGION 6 IN TEXAS

Major Metropolitan Areas

The one major metropolitan area identified in Region 6 is the Houston/The Woodlands/Sugar Land Metropolitan Statistical Area is 9,444 square miles and has an estimated total population of 7,066,141.¹¹ Figure 9 displays the Houston/The Woodlands/Sugar Land Metropolitan Statistical Area and consists of the nine following counties: Austin, Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller.¹²

Demographic Information

Total Population

The projected total population for 2020 for Region 6 is 7,547,256 with a population density of 619.0 people per square mile. The county-level projected population totals for the 13 counties of Region 6 range from 21,273 in Colorado County to 4,978,845 in Harris County, with population densities ranging from 22 people per square mile to 2,920 per square mile, respectively. Total land area for the 13 counties ranged from 379 miles for Galveston County to 1,704.9 for Harris County. Geographically, Texas is 261,250 square miles and Region 6 is 12,184.3 square miles – Region 6 makes up 4.7 percent of the entire land area of Texas. The population of Region 6 makes up 25.4 percent of the population of all of Texas for 2020. Trends in population change between 2018 and 2020 yield the largest change for Harris County with an increase of 107 in projected population and no change for three counties: Colorado, Matagorda, and Wharton Counties. Region 6 experienced an increase of 310,435 population and the state of Texas, as a whole, experienced no change between 2018 and 2020 population projections.¹⁴ Table 3 displays the Region 6 county-level population projections and population densities, as well as three-year changes in both.

Peer Domain

Perceptions of Peer Consumption

Peer Approval/Consumption

When evaluating the risk factors that contribute to certain risky behaviors (in this case, substance misuse behaviors), there are many factors external to an individual that can increase the likelihood that individual would engage in those risky behaviors, one of those risk factors being cultural or social norm. Although many risk factors impose a predisposition to substance use and misuse, perceptions of one's peers' engagement in such risky behaviors can be quite influential on that individual's inclination to do the same. Figures 23-25 display students' perceptions of how many of their close friends use alcohol, tobacco, and marijuana.⁷³

As it has been previously discussed in this needs assessment, availability, and therefore, accessibility to substances is associated with substance use and misuse. Figures 26-28 display adolescents' perceptions of how easy it is to obtain alcohol, tobacco, and marijuana.

Individual Domain

Perception of Harm

High perception of risk or negative feelings towards alcohol or drug use is a major protective factor against substance use and misuse, which was also captured with students' responses to questions about perception of harm on the TSS. Figures 31-35 illustrates students' perception of harm in response to questions about alcohol, tobacco, electronic vapor products, marijuana, and prescription drugs.

Age of Initiation and Early Initiation

Age of initiation, particularly early age of initiation to a substance, is a highly significant risk factor for developing substance use and misuse issues later in life. In fact, as it was mentioned in the front matter of this RNA, about 90 percent of individuals who develop substance use disorders, first tried a substance before the age of 18. Figures 36-41 illustrate the average age of initiation of alcohol, tobacco, and marijuana use, as well as the early initiation to these substances, as reported by the participants in the 2018 and 2020 administration of the TSS.

Appendix B

Glossary of Terms

30 Day Use	Reported use of a substance in the 30 days prior to the report or survey
ACES	Adverse Childhood Experiences. Potentially traumatic events that occur in childhood (0-17 years) such as experiencing violence, abuse, or neglect; witnessing violence in the home; and having a family member attempt or die by suicide. Also included are aspects of the child’s environment that can undermine their sense of safety, stability, and bonding such as growing up in a household with substance misuse, mental health problems, or instability due to parental separation or incarceration of a parent, sibling, or other member of the household.
ACS	American Community Survey
Adolescent	An individual between the ages of 12 and 17 years (SAMHSA)
APA	American Psychological Association
ATOD	Alcohol, tobacco, and other drugs
BAC	Blood Alcohol Concentration
BLS	U.S. Bureau of Labor Statistics
BRFSS	Behavioral Risk Factor Surveillance System. Health-related telephone survey that collects state data about U.S. residents regarding their health-related behaviors, chronic health conditions, and use of preventive services.
CAPT	Southwest Regional Center for Applied Prevention Technologies
CBD	Cannabinoid
CBP	U.S. Customs and Border Protection
CDC	Centers for Disease Control and Prevention
CHR	County Health Rankings

Counterfeit Drug	A medication or pharmaceutical item which is fraudulently produced and/or mislabeled then sold with the intent to deceptively represent its origin, authenticity, or effectiveness. Counterfeit drugs include drugs that contain no active pharmaceutical ingredient (API), an incorrect amount of API, an inferior-quality API, a wrong API, contaminants, or repackaged expired products.
CSAP	SAMHSA's Center for Substance Abuse Prevention
Current Use	Misuse of a substance in the 30 days before participation in survey
DEA	Drug Enforcement Agency
Drug	A medicine or other substance which has a physiological effect when ingested or otherwise introduced into the body. Drugs can affect how the brain and the rest of the body work and cause changes in mood, awareness, thoughts, feelings, or behavior.
DSHS	Department of State Health Services. A state agency of Texas that assists Texans who need services or help. The agency's mission is to improve the health, safety, and well-being of Texans through good stewardship of public resources and a focus on core public health functions.
EBP Resource Center	SAMHSA's online Evidence-Based Practices Resource center providing communities, clinicians, policy-makers and others in the field with the information and tools they need to incorporate evidence-based practices into their communities or clinical settings. The Resource Center contains a collection of scientifically-based resources for a broad range of audiences, including Treatment Improvement Protocols, toolkits, resource guides, clinical practice guidelines, and other science-based resources, including prevention resources.
Epidemiology	The study (scientific, systematic, and data driven) and analysis of the distribution (who, when, and where), patterns, and determinants of health and disease conditions in defined populations.
Evaluation	Systematic application of scientific and statistical procedures for measuring program conceptualization, design, implementation, and utility, making comparisons based on these measurements, and the use of the resulting information to optimize program outcomes. The primary purpose is to gain insight to assist in future change.

EWG	Epidemiological Work Group
FBI UCR	Federal Bureau-Investigation Uniform Crime Reporting
HHS	Health and Human Services. The mission of the U.S. Department of Health and Human Services is to enhance the health and well-being of all Americans, by providing for effective health and human services and by fostering sound, sustained advances in the sciences underlying medicine, public health, and social services.
HIDTA	High Intensity Drug Trafficking Area
Incidence	The occurrence, rate, or frequency of a disease, crime, or something else undesirable. A measure of the risk for new substance abuse cases within a region.
IOM	Institute of Medicine
LGBTQIA+	An inclusive term covering people of all genders and sexualities, such as lesbian, gay, bisexual, transgender, questioning, queer, intersex, asexual, pansexual, and allies.
Lifetime Use	Any misuse of a substance, even just once, in one's lifetime
MAR/MAT	Medication-Assisted Recovery/Medication Assisted Treatment. The use of medications, in combination with counseling and behavioral therapies, to provide a "whole patient" approach to the treatment of and recovery from substance use disorders.
NCES	National Center for Education Statistics
NCLB	No Child Left Behind
Neurotoxin	Synthetic or naturally occurring substances that damage, destroy, or impair nerve tissue and the function of the nervous system. They inhibit communication between neurons across a synapse.
NIDA	National Institute on Drug Abuse
OCA	Texas Office of Court Administration
PDAP	Palmer Substance Abuse Program
PDMP	Prescription Drug Monitoring Program

Person-Centered Language	Prevention Resource Center. Prevention Resource Centers provide information about substance use to the general community and help track substance use problems. They provide trainings, support community programs and tobacco prevention activities, and connect people with community resources related to drug and alcohol use
PPRI	Public Policy Research Institute
PRC	Prevention Resource Center
Prevalence	The proportion of the population within the region found to already have a certain substance abuse problem.
Protective Factor	Conditions or attributes (skills, strengths, resources, supports or coping strategies) in individuals, families, communities, or the larger society that help people deal more effectively with stressful events and mitigate or eliminate risk in families and communities.
Recovery	A process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.
Risk Factor	Conditions or attributes (skills, strengths, resources, supports or coping strategies) in individuals, families, communities, or the larger society that help people deal more effectively with stressful events and mitigate or eliminate risk in families and communities.
RNA	Regional Needs Assessment
SAMHSA	Substance Abuse and Mental Health Services Administration
SDoH	Social Determinants of Health. The economic and social conditions that influence individual and group differences in health status.
Self-Directed Violence	Anything a person does intentionally that can cause injury to self, including death.
SNAP	Supplemental Nutrition Assistance Program

SPF	Strategic Prevention Framework. SAMHSA’s SPF is a planning process for preventing substance use and misuse. The five steps and two guiding principles of the SPF offer prevention professionals a comprehensive process for addressing the substance misuse and related behavioral health problems facing their communities. (SAMHSA)
Stigma	The stigma of addiction—the mark of disgrace or infamy associated with the disease—stems from behavioral symptoms and aspects of substance use disorder. The concept of stigma describes the powerful, negative perceptions commonly associated with substance abuse and addiction. Stigma has the potential to negatively affect a person’s self-esteem, damage relationships with loved ones, and prevent those suffering from addiction from accessing treatment.
Substance Abuse	When alcohol or drug use adversely affects the health of the user or when the use of a substance imposes social and personal costs.
Substance Dependence	An adaptive state that develops from repeated drug administration, and which results in withdrawal upon cessation of drug use.
Substance Misuse	The use of a substance for a purpose not consistent with legal or medical guidelines. This term often describes the use of a prescription drug in a way that varies from the medical direction, such as taking more than the prescribed amount of a drug or using someone else's prescribed drug for medical or recreational use.
Substance Use	The consumption of low and/or infrequent doses of alcohol and other drugs such that damaging consequences may be rare or minor. Substance use might include an occasional glass of wine or beer with dinner, or the legal use of prescription medication as directed by a doctor to relieve pain or to treat a behavioral health disorder.
SUD	Substance Use Disorder. A condition in which there is uncontrolled use of a substance despite harmful consequences. SUDs occur when the recurrent use of alcohol and/or drugs causes clinically significant impairment, including health problems, disability, and failure to meet major responsibilities at work, school, or home.

Telehealth	The use of electronic information and telecommunications technologies to support and promote long-distance clinical health care, patient and professional health-related education, public health, and health administration. Technologies include videoconferencing, the internet, store-and-forward imaging, streaming media, and terrestrial and wireless communications.
TANF	Temporary Assistance for Needy Families
TDC	Texas Demographic Center
TEA	Texas Education Agency
TJJJ	Texas Juvenile Justice Department
TPII	Texas Prevention Impact Index
TSDC	Texas State Data Center
TSS	Texas School Survey. Collection of self-reported tobacco, alcohol, and substance use data among students in grades 7 through 12 in Texas public schools. The survey is sponsored by the Texas Health and Human Services Commission and administered by the Public Policy Research Institute.
TxDOT	Texas Department of Transportation
TxDPS	Texas Department of Public Safety
USCB	U.S. Census Bureau
WHO	World Health Organization
YRBSS	Youth Risk Behavior Surveillance Survey. an American biennial survey of adolescent health risk and health protective behaviors such as smoking, drinking, drug use, diet, and physical activity conducted by the Centers for Disease Control and Prevention. It surveys students in grades 9–12.
